Defenzea Biotrinsic CRW Clip

The Biotrinsic CRW clip is a multiple-mode-of-action indirect bioinsecticide to alleviate corn rootworm damage:

1. Biotrinsic CRW clip interacts with the plant to prime the plant's ISR immune defense system. The Biotrinsic CRW clip-treated root produces chemicals that confuse or repel CRW larvae, making it harder for the larvae to find the corn roots.
2. Biotrinsic CRW clip root regrowth and recovery stimulation for when larvae reach the root and feed.
